

Employee Management System

1- Create an abstract class named **Employee**, **Properties** (Id , Name , Salary)

-Initialize all properties using a constructor.

-**Abstract Method** : public abstract void ShowDetails();

-**Virtual Method** :public virtual void CalculateBonus() , **display**: Bonus = 10% of Salary

2- Create a class **FullTimeEmployee** that inherits from **Employee**.

Additional Property (Department)

Use **constructor chaining** to initialize inherited properties.

Override ShowDetails() to display:Employee ID,Name,Salary,Department

Override CalculateBonus() to display: Bonus = 20% of Salary

3-Create a class **PartTimeEmployee** that inherits from **Employee**.

Additional Property(WorkingHours)

Use constructor chaining.

Override ShowDetails().

4-Create a class **Manager** that inherits from **FullTimeEmployee**.

Additional Property (TeamSize)

Use constructor chaining.

Override ShowDetails() to display all employee information plus the team size.

5-Create a class **CEO** that inherits from **Manager**.

Mark the class as **sealed**.

Override `CalculateBonus()` to display:

Bonus = 50% of Salary

Main Method

Create the following objects:

- One `FullTimeEmployee`
- One `PartTimeEmployee`
- One `Manager`
- One `CEO`

For each object:

- Call `ShowDetails()`
- Call `CalculateBonus()`
